This simple and exciting switching device can add a wide variety to your sonic palette. Construction is very simple. With one click of a foot switch, you can change the order of two loops of effects back and forth. This is a passive device (except for the LED power), so there is no circuit board, just wire up the switch, jacks and LEDs.

Use the project documents provided, starting with the General Build Instructions. Wire the jacks, switch, resistor and LEDs according to the wiring diagram. Start by solder tacking the wiring to the LEDs and then wire the jacks and the switch.
